Level 3 — Hard **prime (H)** — function

Write a function `int isPrime(int n)` that checks if a given number `n` is a prime number. The function should return 1 if the number is prime, and 0 otherwise.

Sample Input:

Enter a number: 7

Sample Output:

7 is a prime number

Your Code

```
1 #include <stdio.h>
2 int isPrime(int n) {
3     if (n <= 1) {
4         return 0;
5     }
6     for (int i = 2; i <= n / 2; i++) {
7         if (n % i == 0) {
8             return 0;
9         }
10    }
11    return 1;
12 }
13 int main() {
14    int n;
```

```
15     printf("Enter a number: ");
16     scanf("%d", &n);
17
18     if (isPrime(n)) {
19         printf("%d is a prime number",
20     } else {
21         printf("%d is not a prime number",
22     }
23     return 0;
24 }
25
```

Program Input (stdin)

Enter input if required...

Output

Enter a number: 7 is a prime number
